

Big Five Personality Test Results

Openness: 0%

A score below 20 signifies a strong preference for stability and tradition, with a reluctance to embrace new ideas or unconventional experiences, favoring the familiar and concrete over novelty and abstraction.

Conscientiousness: NaN%

A score below 20 reflects a tendency towards disorganization and lack of follow-through. These individuals are often more relaxed about their responsibilities, may procrastinate, and are less likely to focus on long-term goals. They may prefer flexibility over structure.

Extraversion: 0%

A score below 20 reflects a strong preference for solitude and introspection. Individuals with this score tend to avoid large groups, enjoy spending time alone, and may feel overwhelmed or exhausted in social situations. They are highly introverted and find fulfillment in quieter, solitary activities.

Agreeableness: 100%

A score greater than 80 indicates a highly agreeable individual who is compassionate, empathetic, and cooperative. They value harmony in relationships and are typically kind, considerate, and willing to go out of their way to help others. These individuals are often seen as friendly and supportive.

Neuroticism: NaN%

A score below 20 reflects a high level of emotional stability. These individuals tend to stay calm and composed under pressure, rarely experiencing intense negative emotions. They are less likely to get anxious, stressed, or upset and are generally able to handle adversity with ease.
