

Big Five Personality Test Results

Openness: 50%

Individuals with a score above 40 tend to be moderately open, appreciating new experiences while also valuing familiarity and structure.

Conscientiousness: NaN%

A score below 20 reflects a tendency towards disorganization and lack of follow-through. These individuals are often more relaxed about their responsibilities, may procrastinate, and are less likely to focus on long-term goals. They may prefer flexibility over structure.

Extraversion: 40%

With a score between 20 and 40, individuals may prefer solitude and quiet environments. They are less likely to seek out social situations and may feel drained by prolonged social interaction. They are more introverted and comfortable with smaller, close-knit groups.

Agreeableness: NaN%

A score below 20 suggests low agreeableness, with individuals who may be blunt, skeptical, and less concerned with others' emotions or needs. They are more likely to challenge authority, question others' motives, and prioritize their own interests over maintaining harmony in relationships.

Neuroticism: NaN%

A score below 20 reflects a high level of emotional stability. These individuals tend to stay calm and composed under pressure, rarely experiencing intense negative emotions. They are less likely to get anxious, stressed, or upset and are generally able to handle adversity with ease.
